PROFESSIONAL SUMMARY

PROFESSIONAL SUMMARY

Experienced Full-Stack Engineer specializing in PHP (Symfony, Yii, CodeIgniter), Node.js, and

React-based architectures, with a strong focus on AI-driven development and integration. Proven

track record in developing enterprise-grade workforce management solutions, financial platforms, and integrating LLM APIs (OpenAI) to build intelligent features like chatbots. Highly

proficient in leveraging AI coding assistants (Cursor, GitHub Copilot, Claude) to accelerate

system architecture, optimize codebases, and deliver robust solutions in distributed agile

environments.

WORK EXPERIENCE

Dergtech

City: Tiranë | **Country:** Albania

[01/11/2023 - Current]

Front-end developer

Developed CATO Hospital Dispatch Management System (v2), streamlining hospital logistics.

- Implemented features for patient transport assignment, asset movement, and inter-departmental coordination.

TrackForce (Under Ritech)

City: Montreal | **Country:** Canada

[01/11/2022 - 28/02/2026]

Back-end PHP Developer

Working as a Full-Stack Developer for a leading cloud-based workforce management solution in the security industry.

- Developing and maintaining the TrackTik Cloud platform using Yii 1.1 (legacy) and Symfony frameworks.
- Collaborating with a global team to enhance security workforce scheduling, reporting, and management tools.

Ritech CO

City: Prishtinë | **Country:** Kosovo

[14/02/2022 - 28/02/2026]

Software Engineer

Working as a Full-Stack Developer for a leading cloud-based workforce management solution in the security industry.

Client: Cambria Capital (MyIPO) | February 2022 - November 2022

- Served as a Full-Stack Developer for the MyIPO online offering platform, a registered Broker/Dealer system.
- Built the backend using Node.js and the frontend using React and React-Admin.
- Developed the mobile interface using React Native.

Freelancer

City: Prizren | **Country:** Kosovo

[04/01/2017 - 14/02/2022]

Software developer

- Developing web and mobile applications for international and local clients (Germany, Saudi Arabia, Kosovo).
- **AI Integration:** Integrated OpenAI API to design, test, and deploy intelligent chatbots for client platforms, improving automated customer interaction.
- Leveraging AI-assisted development tools (Cursor, Copilot) to rapidly prototype and architect complex e-commerce platforms and business management systems.

MAC

City: Prizren | **Country:** Kosovo

[06/01/2021 - 14/02/2022]

ICT Lecturer

Delivered lessons in Java, OOP, PHP Web Development, and MySQL Administration.

- Led a Python Programming Club focusing on scripting, problem-solving, and introducing basic AI library concepts.

Kreatx SHPK

City: Tirane | **Country:** Albania

[08/03/2016 - 02/01/2017]

Software Developer

Served as lead developer on the OSHEE ERP system (Electricity Power Distribution System Operator in Albania) using PHP (CodeIgniter) and MySQL.

EDUCATION & TRAINING

[10/10/2012 - 10/09/2015]

Bachelor in Computer Engineering

Epoka University

[16/09/2013 - 01/07/2014]

Exchange Student

Yildiz Technical University

[12/10/2015 - 15/09/2017]

MsC. Computer Engineering

PROJECTS

[01/11/2023 - 01/09/2024]

CATO Hospital Dispatch Management System (v2)

Developed a React.js-based hospital dispatch management application that streamlined patient transportation, asset movement, and staff assignment workflows. Built an intuitive interface to improve interdepartmental coordination, optimize resource allocation, and increase operational efficiency across hospital logistics.

Tech Stack: React.js, JavaScript, REST APIs, Git.

Link: <https://www.diractive.nl/>

[14/02/2022 - 01/11/2022]

MYIPO (Cambria)

Full-Stack Developer

- Developed and maintained **MyIPO**, an online securities offering platform for **Cambria Capital** registered **FINRA/SIPC Broker-Dealer**. Contributed to both web and mobile applications, delivering secure and scalable features for the investment

platform.

- Designed and implemented backend services, REST APIs, and business logic while collaborating closely with frontend and mobile teams to deliver a seamless user experience.

Tech Stack: Node.js, MySQL, React, React-Admin, React Native, REST APIs

[01/11/2022 - Current]

Tracktik

Full-Stack Software Engineer

- Developed and maintained **TrackTik Cloud**, an enterprise Workforce Management platform used by security companies to manage scheduling, workforce operations, reporting, incident management, and field activities.
- Implemented and enhanced backend features, resolved complex production issues, optimized existing modules, and collaborated with cross-functional teams to deliver scalable solutions in a large enterprise codebase.

Tech Stack: Symfony, Yii 1.1, PHP, MySQL, REST APIs, Git

Fin Plus Business Management

Full-Stack Software Developer

- Developed **FinPlus**, a multi-tenant business management platform that enables companies and accounting firms to manage multiple businesses from a single system through profile switching. Designed to streamline day-to-day business operations while supporting multiple tenants within a unified application.
- Implemented core ERP modules including sales, purchasing, expense management, inventory, customer management, and financial operations, delivering a responsive web application optimized for desktop and mobile devices.

Tech Stack: PHP (CodeIgniter 3), MySQL, Bootstrap, jQuery

Link: <https://finplus-ks.com>

EL Petrol Loyalty Application

Developed a full-stack loyalty and business management platform for **EL Petrol**, designed to manage both individual loyalty customers and corporate business agreement clients.

The platform enabled EL Petrol to manage customer accounts, track fuel purchases, calculate loyalty points based on sales activity, and allow customers to redeem rewards and benefits. Additionally, it supported corporate agreements by managing fuel allocations for client employees, tracking consumed litres, and generating monthly usage data for billing and reconciliation purposes.

The solution included web and mobile applications, providing efficient management of customer relationships, transactions, loyalty programs, and corporate fuel benefits.

Tech Stack: PHP (CodeIgniter 3), MySQL, Node.js (Microservices), Bootstrap, jQuery, React Native

Link: <https://elpetrol-ks.com/>

Kukalir

Developed a web and mobile application focused on helping users discover and track discount offers from shops across Kosovo.

The platform enabled users to browse store discount magazines, compare product prices, and find the most affordable offers available. The application simplified the process of discovering promotions by collecting discount information from different retailers and presenting users with the best available prices, which inspired the

application's name ("Kukalir" – related to searching for the cheapest option).

The solution provided an accessible platform for consumers to monitor promotions, explore shop offers, and make better purchasing decisions.

Tech Stack: PHP (CodeIgniter 3), MySQL, Bootstrap, jQuery

[01/08/2022 - 10/02/2023]

Arta Kazazi Tailor Rental System

Developed a tailor rental management system for managing bridal and dress rental operations. The platform enabled the tailor to efficiently manage dress inventory, rental schedules, and customer orders.

The system allowed the creation and management of rental reservations, tracking availability of bridal dresses and outfits, and recording customer measurements and order details to ensure accurate tailoring and rental processing.

The solution provided a centralized platform for organizing rental workflows, improving scheduling efficiency, and simplifying customer order management.

Tech Stack: Node.js, MySQL, React-Admin (Framework)

Menufy (Restaurants profiles)

Developed a CMS-based restaurant management platform that enabled restaurants to create and manage their digital presence during the COVID-19 pandemic.

The platform allowed restaurants to showcase essential information such as menus, special offers, business details, location, and contact information through customizable profiles. Additionally, the main platform helped customers discover nearby restaurants and explore available food options based on their location.

The solution provided restaurants with an easy-to-manage digital channel while improving customer access to restaurant information and online menus.

Tech Stack: PHP (CodeIgniter 3), MySQL, Bootstrap, jQuery

ERP for OSHEE

Worked as a **Lead Developer** in the design and development of the ERP system for **OSHEE (Operatori i Shpërndarjes së Energjisë Elektrike), the main electricity distribution company in Albania**, while employed at Kreatx.

Responsible for leading programming activities, developing core ERP functionalities, and contributing to the implementation of a large-scale enterprise solution used for managing business operations and internal processes.

The project involved building and maintaining complex web-based modules, database-driven workflows, and user interfaces tailored to the operational requirements of a large utility organization.

Tech Stack: PHP (CodeIgniter 2), MySQL, ActionScript (Web)

Cheaptasy

Developed an e-commerce platform for a German client, connecting local shops with customers through web and mobile applications.

The platform enabled businesses to showcase and manage their products while providing customers with an online shopping experience. The solution supported product browsing, customer interactions, and marketplace functionalities across web and mobile platforms.

The project involved developing a scalable backend system, responsive web interface, and cross-platform mobile application to support both merchants and end users.

Tech Stack: PHP (CodeIgniter 3), MySQL, Bootstrap, jQuery, React Native
